ARE YOU READY FOR REAL CYBERSECURITY RESEARCH?

Join the Intelligent Systems Security Lab (ISSLab)

Call for Dedicated Student Researchers

ISSLab is expanding. **We are looking for highly motivated undergraduate and graduate students who want to move beyond theory and get hands-on experience in network defense**, AI security, and decentralized systems. If you are passionate about **solving real-world security challenges**, **building on actual hardware**, and **kickstarting your academic career**...

WE WANT YOU ON OUR TEAM!

🔬 What You Will Do

- **Hands-On Infrastructure Management**
  Gain access to our **in-house data center**. You won't just run simulations—you will manage, program, and deploy solutions on **real hardware, servers, and containerized environments**.
- **Industry-Sponsored R&D**
  Contribute to massive-scale, real-world solutions, including high-throughput network monitoring and anomaly detection frameworks backed by industry partners.
- **Defense-Industry AI Security**
  Work on the cutting edge of AI defense, developing adversarial attack mitigation strategies to protect mission-critical models and digital twin systems.

📈 What We Provide Your Career

- **TÜBİTAK Project Mentorship**
  We actively guide our students in writing, submitting, and executing funded TÜBİTAK student projects.
- **Academic Publishing**
  Work side-by-side with our team to co-author high-impact research, submit to top-tier journals/conferences, and build a competitive academic portfolio.
- **Technical Experience**
  A collaborative environment where you gain the practical skills needed to excel in academia or the cybersecurity industry.
- **Istanbul Data Center Internship**
  Ambitious and hardworking students may earn an opportunity to intern in an operational data center in Istanbul to see real-life industry infrastructure in action.
